

Public Information Meeting Minutes

RE: **Stutson Street Improvement Project**

(Lake Avenue to River Street)

PC 05125

Date: April 26, 2005 7:00 P.M.

Location: .

Attendees: See attached.

Rich Koss opened the meeting by welcoming the attendees and introducing himself and the other City staff members present. He gave a general outline of the project and construction schedule.

Attached is the agenda/informational flyer handed out at the meeting.

Rich gave a general outline of the project and construction schedule. Under present transportation funding, the project will include pavement milling and resurfacing with installation of new curbs, sidewalk replacement as necessary, driveway aprons, water main, water services, catch basins, and hydrants. The pavement width will remain the same.

He also discussed enhancement options that may be available using a local improvement ordinance (which the residents would have to share the cost) or grants secured by the City of the residents.

The enhancements could include more attractive street lights and/or restoration of the original brick pavement.

Rich stated that more attractive streets lights would cost an additional approx. \$35,000 and a reconstructed brick pavement would cost approximately \$250,000.

The general consensus among the attendees was in favor of more attractive streets and brick pavement but only if a grant would pay the additional costs.

Rich suggested an "curb only" project for the present time with pavement improvements only after possible grants were researched..

Proposed parking restrictions was also discussed, with the general consensus being that on parking should be allowed in front of the churches and business and alternate side parking be allowed in the residential area.

There will be one more Public Information Meeting prior to construction.

Respectfully Submitted,

Rick Koss, Project Engineer
