

Vanpooling 101

What is a Vanpool?

A Vanpool is a group of up to 15 commuters who voluntarily participate in a rideshare arrangement. The van must make just one trip to work, one trip home, and 80% or more of the total vehicle miles must be used for commuting purposes. We provide the van, van insurance, and van maintenance. The group shares the cost of operating the van.

Vanpooling is one of the most economical means of transportation available in The United States, and the safest mode of transportation. It costs much less than driving alone to and from work, it reduces the number of cars on our roadways, it saves thousands of gallons of fuel and drastically reduces air pollution on an annual basis.

Why Should I Vanpool?

How Much Does it Cost to Vanpool?

The vehicle style and the monthly mileage allowance selected determine vRide's monthly service charge. The vanpool coordinator adds to that the cost of fuel, parking, tolls, and incidentals, and divides the total monthly operating cost equally by the number of passengers. Therefore, monthly passenger fares can vary. The cost to vanpool is often comparable to what you pay for just gasoline. When you consider the wear and tear, maintenance, tires, and the entire incidental costs associated with driving alone, vanpooling is very economical.

We offer factory and custom conversion vehicles with a variety of features to suit your needs and budget. All commuter vans have cloth seats, carpeting, and front & rear air conditioning and heating. Our conversion vehicles also have individual reading lights and a modified floor plan for easier exit/entry to the rear seats.

What Types of Vehicles are Used?
